

Parkinson's Disease Detection using Hand-Drawn Images

This project focuses on detecting Parkinson's disease from hand-drawn spiral and wave images using models like VGG16, CNN and ResNet50. The application assists in identifying signs of Parkinson's disease by analyzing motor impairments reflected in these drawings.

1. Software Requirements:

- Python 3.8+
- TensorFlow 2.x
- Keras 2.x
- Android Studio (for app deployment)
- Java Development Kit (JDK) 8 or higher
- Android SDK
- Android Emulator or Physical Android Device

2. File organization in Android Studio

3. Project Setup in Android Studio

- Open Android Studio
- Choose "Open an existing project" or create a new empty project.
- Minimum SDK
- Choose API Level 21 or higher for TFLite support.
- In your app/build.gradle file, add TensorFlow Lite dependencies:
- Create Assets Folder:
- Right-click app > New > Folder > Assets Folder
- Or manually create: src/main/assets/
- Copy .tflite File:
- Paste your vgg16_model.tflite into the assets folder.
- Load and Run the TFLite Model
- Use Camera or Gallery to get an image.

4.Run the App

- Connect your physical Android device or use an emulator.
- Click the Run ► button in Android Studio.
- Test with different fundus images.
- View the result on the app screen.
